

Time for a Brain Detour

Sometimes it's necessary to take a detour. Some of the blogs here at *Money Women and Brains* have featured how the brain contributes to the differences between men and women. The intent here is that women will gain a better understanding of themselves and how parts of their feminine brain offer untapped potential for personal and financial success.

As with many things between men and women there are topics of stirring controversy. The difference in brain structure between males and females as well as how they access the right or left hemisphere for thinking, processing and subsequent behaviors can be a simmering cauldron for those trying to validate the better of the species.

Let's set aside that simmering cauldron debate for a moment.

In order to gain a better understanding of what these brain differences actually are and how they are currently being interpreted, I'll be posting a series of daily blogs outlining some of the key points. I promise this will not be in-depth biology lessons (*sign of relief!*), but I will be covering some basics that will help you gain greater insight into how your feminine brain is designed and what unique options you've got access to.
